

# SUPER HYDROPHILIC COATING FOR GLASS. REDUCE THE REGULAR GLASS CLEANING COST.

## Clean Self Coat MC - T Manual

### Note for the application

- ① Do not apply when the glass surface is hot.  
Proper surface temperature is below 30 °C.
- ② Please avoid the windy day.
- ③ Do not apply in the rainy day and water splashes. Even next day of application should not take the rain and water.
- ④ Since the coating agent is alcohol-based, please do not use where there is fire.

The reason of ①②  
For the drying of the coating agent is faster,  
the coating surface will be uneven.

### Tools

Clean self Coat  
MC - T

Squeegee  
35cm

Micro fiber cloth  
W35cm×L23cm

Clip  
One squeegee  
needs 4

Tray  
Over 35cm

Masking  
membrane

### Cleaning) Moisture does not remain on the glass surface after the cleaning.

Wipe the glass surface  
with water

Clean up  
the window frame

Draining with  
squeegee

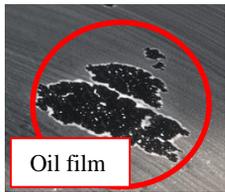

Wipe the glass surface

**Example 1)** Use the glass cleaner when there is oil film or water stain.※

**Example 2)**

Cover the window frame with masking tape when you use the glass cleaner.

Oil film

Glass Cleaner

※Please contact us  
If you need glass  
cleaner or water  
stain remover.

Masking tape

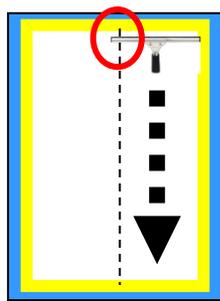

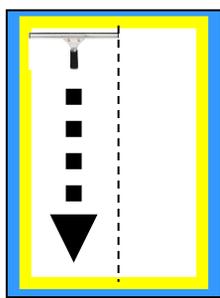

### Step 1) Preparation

Fold the microfiber cloth to the four, and clipped to the squeegee.  
**Point)** Clipped the cloth without wrinkles.  
When the cloth clipped loosely, the surface becomes uneven.

① laid vinyl masker on top of the tray, pour the coating agent.  
② Put the coating agent to squeegee. 10g per 1sqm  
**Point)** Because it tends to be uneven coating, put on evenly to cloth like a wet tissue.

## ■ Step2) Application

**Point 1)**  
Overlaid as little as possible.  
apply straight in parallel

**Squeegee application with a little pressure to the parallel with the window glass. Slowly down from top to bottom.**

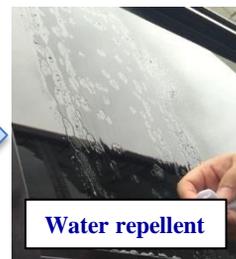

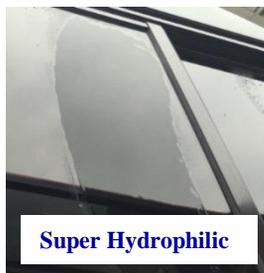

### Other points)

- When you apply to the scratch parts, it may not apply well because of surface tension. It would be repelled.
- Usually the application is once. In case of over-coating, the surface should be dry and apply again. Over-coating can perform better adhesion and super-hydrophilic effect, but you will see the unevenness.
- When application cloth is not dirty, it can be reused after washing.
- The coating dries fast. However, it usually takes 24 hours to densify the inorganic component after the solvent in the coating film has completely evaporated,. Therefore, please do not take water or rain at least one day after the application.

**Point 2)**  
Change the cloth  
when it is dirty

## ■ Verification after the application

-After coating, check the hydrophilic state by spraying water to the glass. If the water is repelled, there are not applied well. Or it did not adhere because there is oil film. If you cannot apply well, please apply again. When the oil film is strong, apply after the cleaning the glass with Glass Cleaner.

## ■ Remove the coating

- Immediately after application • • • Use the cloth to wipe with spraying water.
- More than one hour after application • • • Use Glass Cleaner or polisher to remove the coating.

## ■ Notice

- Store the coating agent where the children can not reach.
- Please be careful to fall or break or leak the container .
- In addition, please keep the container upright.
- Do not drink the coating agent. Do not touch the coating agent to your face, eyes or such as mucous membrane.
- Please follow the manuals.

## ■ Cautions

- In the event of contact with skin, wash skin throughout with water.
- If accidentally swallowed, rinse mouth thoroughly with water. In case discomfort, obtain immediate medical attention.

## ■ Storage and disposal

- Please keep the container with cap in cold and dark place. Avoid the heat ,humidity and freezing location.
- Containers should be discarded from the run out of solutions.
